

Jack Tchuente

📍 Québec, QC, Canada ✉ jacktchuente@gmail.com 🌐 in/jack-tchuente

SUMMARY

Experienced Full Stack Developer, specializing in the creation of web applications and systems. Proficient in the use of modern frameworks and technologies such as Django, Angular, ASP.NET, and Kubernetes, with a strong focus on delivering efficient and user-friendly solutions.

EXPERIENCE

Full Stack Developer

Référence Système

April 2023 - Present, Québec, QC, Canada

- Developed a web application managing hundreds of thousands of customer files and processing several thousand invoices monthly, supporting high-volume, time-sensitive operations for a team of 20–30 internal users (accounting, operations, administrative staff).
- Optimized the authentication and authorization process by introducing Redis-based role caching (replacing token-based evaluation), reducing permission evaluation time by ~50% while maintaining strong security guarantees.
- Redesigned the account statement, invoicing, and credit system, eliminating data inconsistencies and improving reliability of financial workflows, while ensuring consistent integration with the Avantage financial system.
- Replaced legacy Crystal Reports with a modern document generation pipeline, reducing maintenance overhead, accelerating report generation through optimized queries, and significantly improving developer onboarding and flexibility when updating or creating reports.
- Implemented background processing workflows (Hangfire) for document generation and email delivery, reducing user-facing latency and improving application responsiveness.
- Strengthened CI/CD pipelines and deployment processes, improving release reliability and enabling more consistent production updates.
- Devised and enforced comprehensive audit logging utilizing Sentry, achieving 100% traceability for sensitive operations and facilitating rapid troubleshooting and compliance reviews across multi-user accounting workflows.

Full Stack Developer

CIUSSSCN

September 2019 - August 2023, Québec, QC, Canada

- Developed a healthcare application (Django, Angular, Kubernetes), Concerto, a chronic disease management platform contributing to peer-reviewed research published in BMJ Open, supporting both clinicians and patients in real-world care settings.
- Collaborated within a cross-functional team of 5+ members (designers, product managers) and partnered weekly with physicians and healthcare stakeholders to design and refine clinical workflows, improving usability and supporting adoption in primary care environments.
- Conducted 20+ user testing sessions with patients, translating feedback into iterative UX and workflow improvements, enhancing usability and patient engagement.
- Engineered automated testing pipelines and CI/CD workflows across cloud-based infrastructure (OpenShift), reducing deployment issues and improving release consistency and reliability.

Full Stack Developer

ID-M

September 2021 - December 2022, Québec, QC, Canada

- Designed and implemented a zero-knowledge proof-based identity system, supporting multiple secure verification use cases and strengthening data confidentiality for security-focused applications.
- Built a customizable multi-factor authentication challenge service, supporting 10+ authentication methods (SMS, TOTP, email, OAuth, biometrics, etc.), and a visual, low-code workflow builder (Node-RED-like) enabling clients to design and orchestrate authentication flows via drag-and-drop components.
- Drove architectural decisions across identity, authentication, and frontend systems, balancing trade-offs between security, performance, and integration complexity.
- Developed cross-platform applications across web, mobile, and Google Workspace (Gmail integration), delivering a cohesive user experience across multiple environments.
- Enabled the startup to conduct 10+ product demonstrations and technical evaluations, including partner-facing presentations, by delivering production-like prototypes and demo-ready environments.

SKILLS

French, English

C#, JavaScript / TypeScript, Python, HTML / CSS, Google Apps Script

ASP.NET Core, Angular, Django, FastAPI

SQL Server, PostgreSQL, Redis

Git, GitLab, CI/CD, Docker, Kubernetes
